QUICK START

Media module

sp-tvs · TV and sound

SHOOMS

QS-MM-EN · 09.2026

BEFORE YOU START

The module and the TV are mounted in a dry place with air around them. Only SHOOMS staff open the module's enclosure.

INSTALLATION STEPS

1. Fix the TV and the media module in their chosen places.
2. Connect the HDMI cable through the adapter to the module and to the TV input; note the input number.
3. For speakers or an amplifier, plug in the supplied USB audio adapter — before switching the power on. If the TV's own sound is enough, sound goes over HDMI.
4. Connect the network cable to the LAN connector.
5. Connect the power supply: the module switches on by itself, there is no separate button.
6. Switch on the TV, select the right HDMI input and wait for the system's picture.
7. Check the sound at working volume and compare the picture with what the server shows.

BEFORE YOU LEAVE

- [ ] TV and module fixed
- [ ] HDMI cable connected, input number noted
- [ ] USB audio adapter plugged in before power-on
- [ ] LAN cable connected
- [ ] The system's picture is on the screen
- [ ] Sound checked at working volume
- [ ] Serial number recorded

IF SOMETHING DOES NOT WORK

No picture on the screen	The TV input, the HDMI cable and the adapter
Picture but no sound	The USB audio adapter: plugged in before power-on; the TV or amplifier volume
«No URL configured»	The page address in the module's settings — contact support
The picture is frozen	The LAN cable and the range router

The full user manual is in the documentation set or behind the QR code. SHOOMS support: support@shooms.net
